debe generar
BIENESTAR SOCIAL*

- **1999-2004** > Bachiller en Ingeniería Civil, UNI
- **2005-2009** > Defensa Civil, Gobierno Regional del Callao (GRC)
- **2006-2009** > Maestría en Gestión de Riesgo de Desastres, UNI
- **2009-2012** > PhD en Ingeniería de Tsunami, Universidad de Tohoku
- **2012-2016** > Profesor Asistente en IRIDeS
- **2016-** > Profesor Asociado en IRIDeS y adjunto a la Facultad de Ingeniería Civil

Miembro del sub-comité de Tsunami de la Sociedad Japonesa de Ingenieros Civiles (JSCE) (50 miembros a nivel nacional, 2 extranjeros)

Idiomas: Español, Inglés y Japonés

Lecciones aprendidas

- Aprende todo lo que puedas, después el tiempo se reduce y las ganas de aprender aumentan
- Encuentra un o varios Mentor(es) en tu área

Lecciones aprendidas

- **Infórmate, percibe tu entorno y la situación mundial → (Identificar Necesidades Sociales)**
- **Aprende a trabajar en equipo**

Multi-disciplinario

Trans-disciplinario

Inter-disciplinario

- **2009-2012** > PhD en Ingeniería de Tsunami,
Universidad de Tohoku

2011 Terremoto de Tohoku

2011年の日本の地震

Japan earthquakes 2011

発生地点・規模・時刻分布図

International Research Institute of Disaster Science(IRIDS)

Major Research Issues

Reconstruction of disaster prevention and reduction technologies based on reality of the 2011 off the Pacific coast of Tohoku earthquake and tsunami disaster

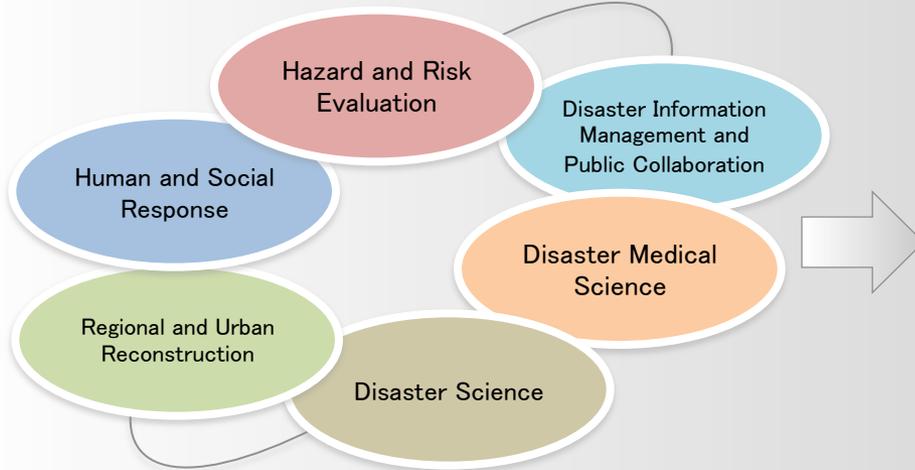

Construction of "Disaster area supportology" in the event of a disaster

Advancement of anti-hazard performance and upgrading for multiple-fail-safe in urban areas as disaster recovery projects

Research on mechanism of mega earthquake and tsunami generation and developing of next-generation of early detection technology of tsunamis

Establishment of disaster medical relief service system of responding appropriately to wide area massive disaster

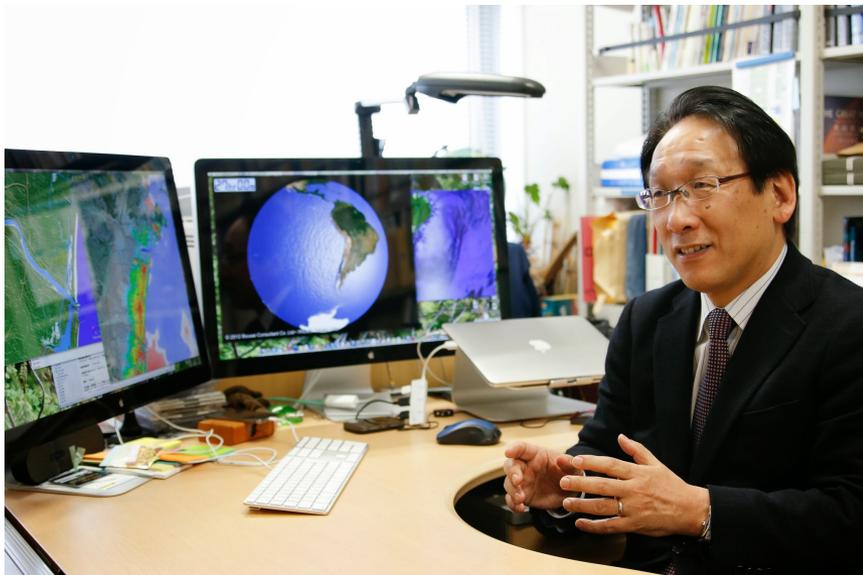

Rehabilitation regional and urban and creating disaster digital archive pass for the next generation

Research institute in Japan and overseas

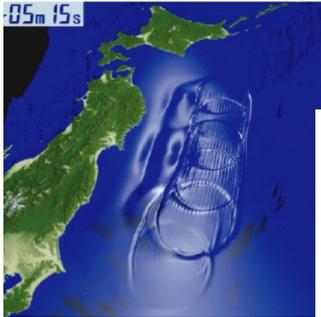

Private companies

Affected local governments

Hazard and Risk Evaluation Research Division

Reconstruction of disaster prevention and reduction technologies based on reality of the 2011 off the Pacific coast of Tohoku earthquake and tsunami disaster

Research Fields

- Earthquake Engineering
- Tsunami Engineering
- Disaster Potential Study
- Remote Sensing and Geoinformatics for Disaster Management
- Science and technology for low-frequency Risk Evaluation
- Technology for Optimum Mitigation
- Technology for global Disaster Risk

Human and Social Response Research Division

Construction of “Disaster area supportology” in the event of a disaster

Research Fields

- Disaster-Related Cognitive Science
- Affected Area Supportology
- Preservation of Historical Materials
- Social Systems for Disaster Mitigation
- Disaster Legislation
- Japanese Disaster Culture
- Comparative Mitigation Society

Regional and Urban Reconstruction Research Division

Advancement of anti-hazard performance and upgrading for multiple-fail-safe in urban areas as disaster recovery projects

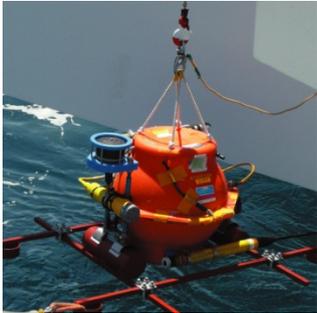

Research Fields

- Technology for Urban Resuscitation
- Radiational Decontamination Science
- Regional Safety Engineering
- Disaster Robotics
- International Strategy for Disaster Mitigation

Disaster Science Research Division

Research on mechanism of mega earthquake and tsunami generation and developing of next-generation of early detection technology of tsunamis

Research Fields

- Marine Geodesy Research
- Seismic Hazard Research
- Volcanic Hazard Research
- Geologic Hazard Research
- Atmospheric and Oceanic Disaster Research
- Space Environment Disaster Research
- Natural Disaster Research

Disaster Medical Science Research Division

Establishment of disaster medical relief service system of responding appropriately to wide area massive disaster

Research Fields

- International Cooperation for Disaster Medicine
- Disaster-related Infectious Disease
- Radiation Disaster Medicine
- Disaster Psychiatry
- Disaster Obstetrics and Gynecology
- Disaster-related Public Health
- Disaster Medical Informatics

Disaster Information Management and Public Collaboration Division

Rehabilitation regional and urban and creating disaster digital archive pass for the next generation

Research Field

- Disaster Digital Archive
- Disaster Reconstruction design & Management
- International and Regional Cooperation Office

Endowed Research Division

Research Field

- Earthquake induced Tsunami Risk Evaluation (Tokyo Marine)

Critical problems since the aftermath

- ❖ How **extensive** was the impact (area)?
- ❖ How **many people** are exposed, killed, and injured ?
- ❖ How **many structures/infrastructures** are damaged ?
- ❖ How extensive **disaster relief** activities should be deployed ?
- ❖ How **much amount of debris** need to be removed ?
- ❖ How **much economic losses** are ?
- ❖ How **much progress** does reconstruction process have?
- ❖ ...

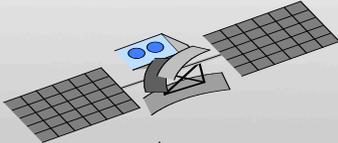

Acerca del Laboratorio de Sensores Remotos y Geoinformatica para la Mitigacion de Desastres

In the Laboratory of **Re**mote Sensing and **Ge**oinformatics for **D**isaster Management (ReGiD) we **develop technology for damage estimation** and rapid response support after disasters.

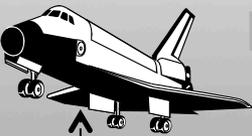

We **enhance simulation techniques** (earthquake, tsunami, evacuation) and remote sensing technology (satellite image, UAV, ICT) to grasp within large areas the possible impacts to buildings and people from a disaster.

Remote Sensing Platforms and Sensors

Satellite [Optical, Thermal, SAR]

Space Shuttle

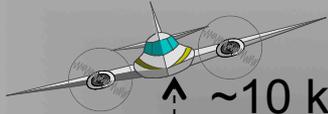

[Radar]

~1000 km

~300 km

Aircraft

[Optical, SAR, LIDAR]

~10 km

Helicopter

[Optical, Thermal, Video]

~0.3 km

UAV

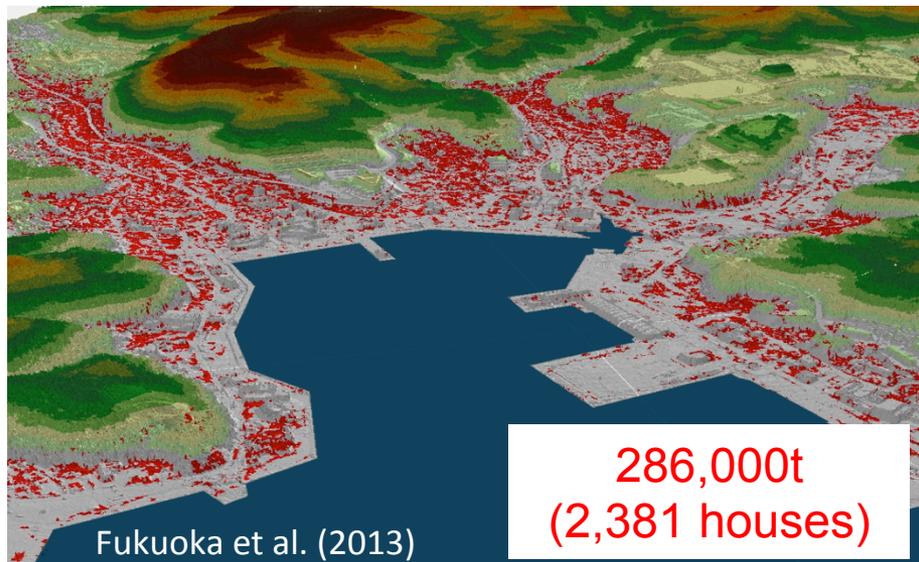

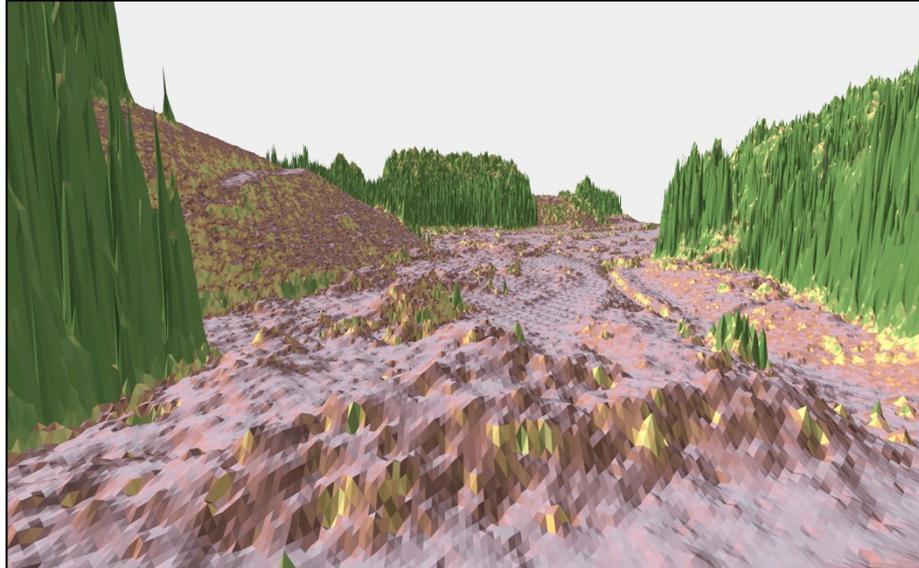

[Optical, Video]

~100 m

Tsunami Debris Mapping using LiDAR (Light Detection and Ranging)

Tsunami Damage Detection using PALSAR

0.0 1.0

Damage proportion

0.0 1.0

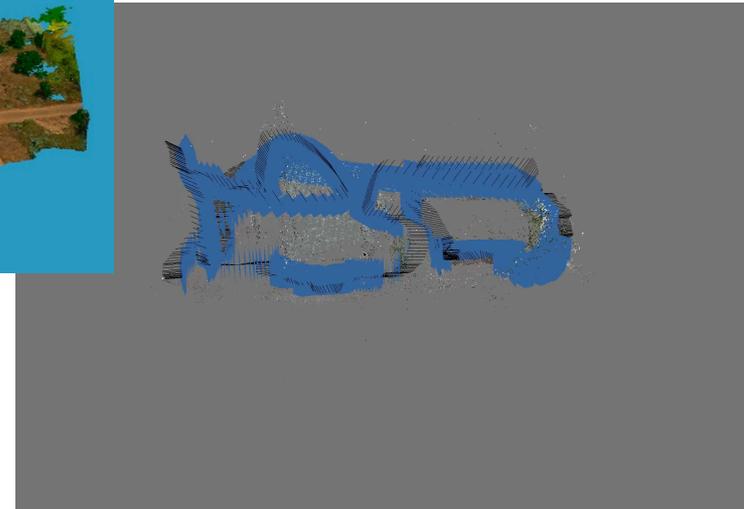

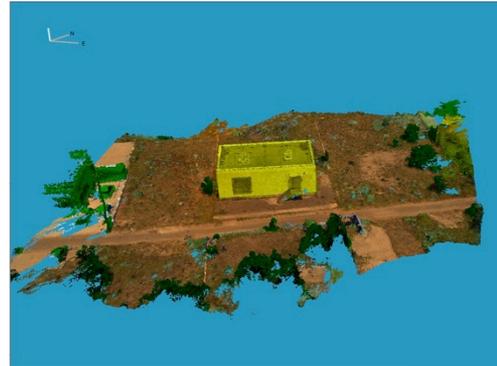

UAV applications

Damage field survey using UAV technology

Searching survivors using UAV

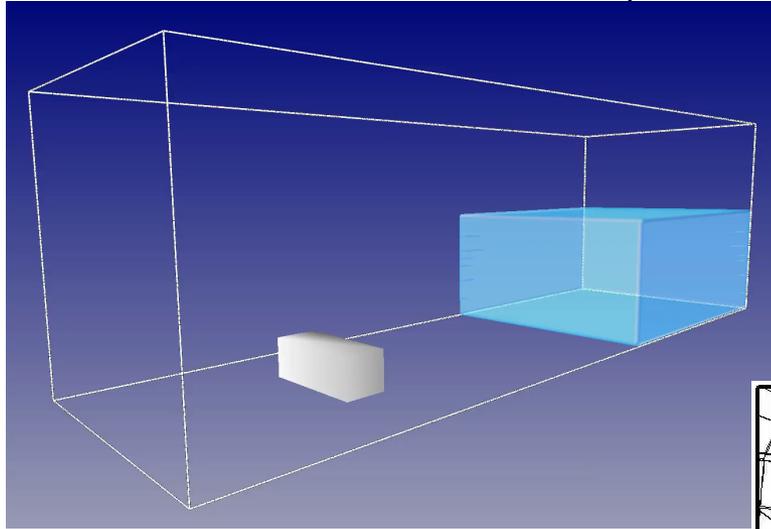

Building 3D model for damage survey with UAV

Enhancing Lattice Boltzmann method
for 3D tsunami simulation

Sato, 2016

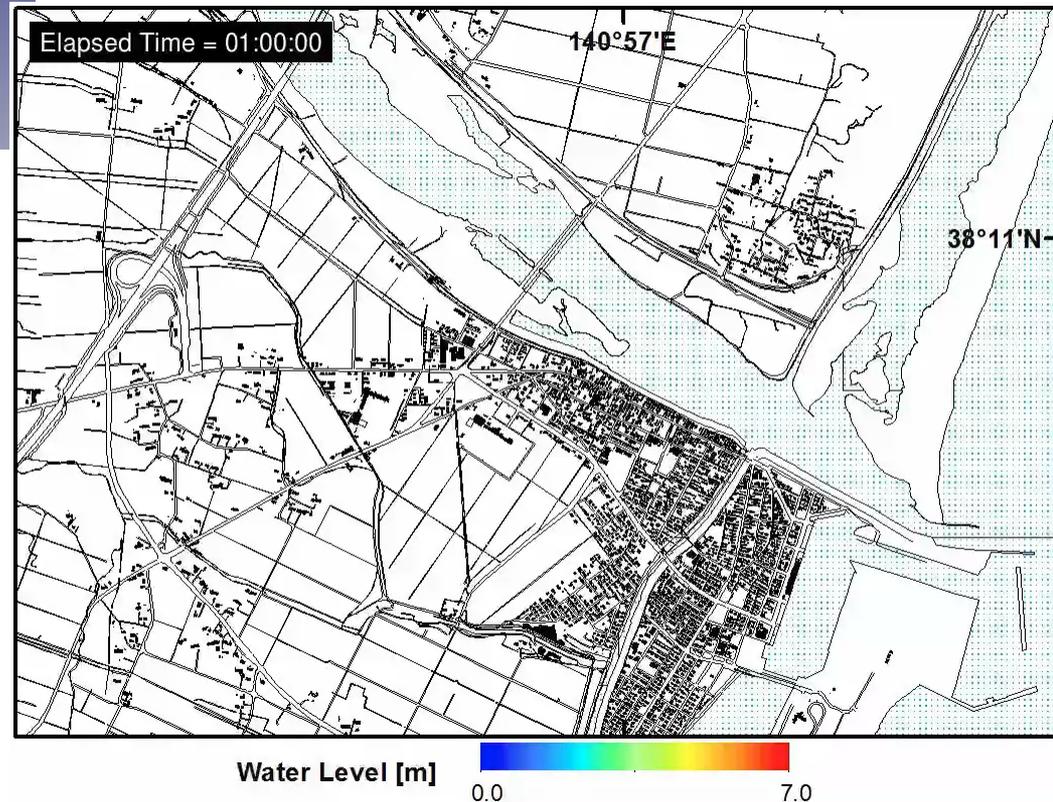

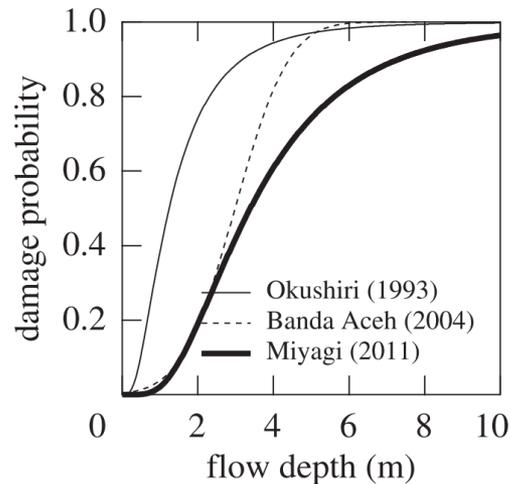

Tsunami Simulation

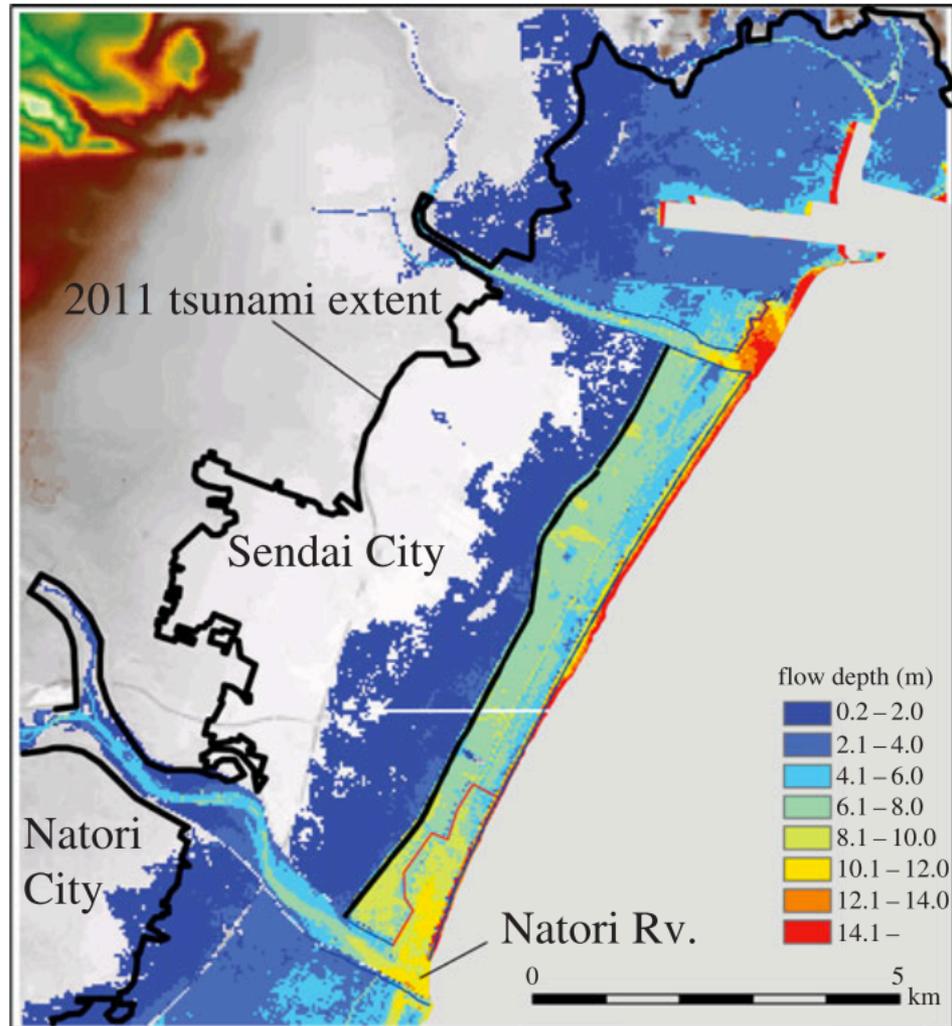

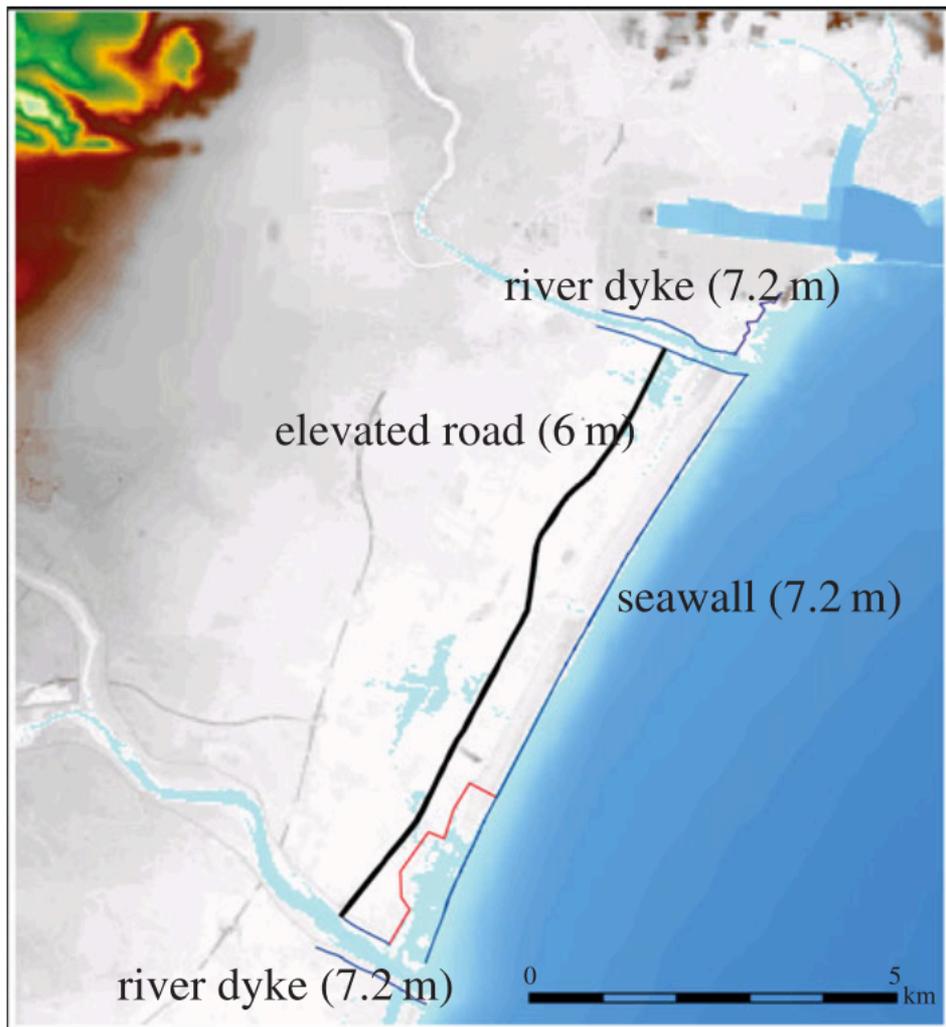

Integration of tsunami fragility curves and tsunami simulation
for damage estimation

Hayashi, 2016

Developing tsunami fragility curves

Tsunami Simulation

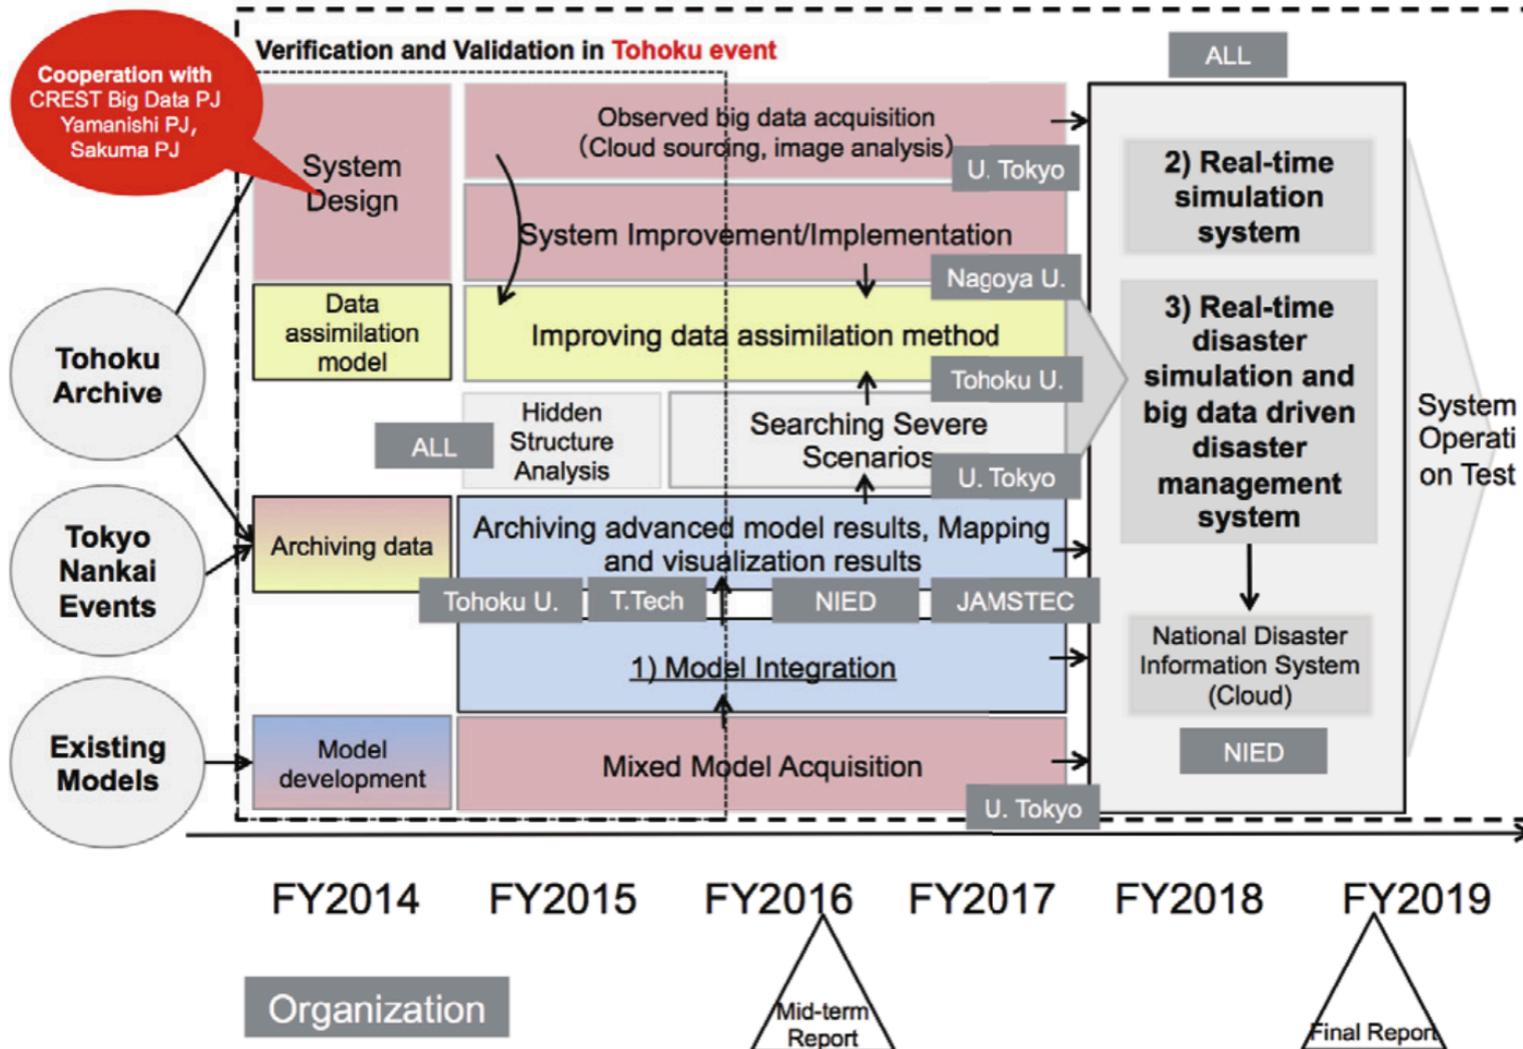

Projecto CREST (Big Data)

Tsunami Simulation

Application to Tokyo and Nankai Events

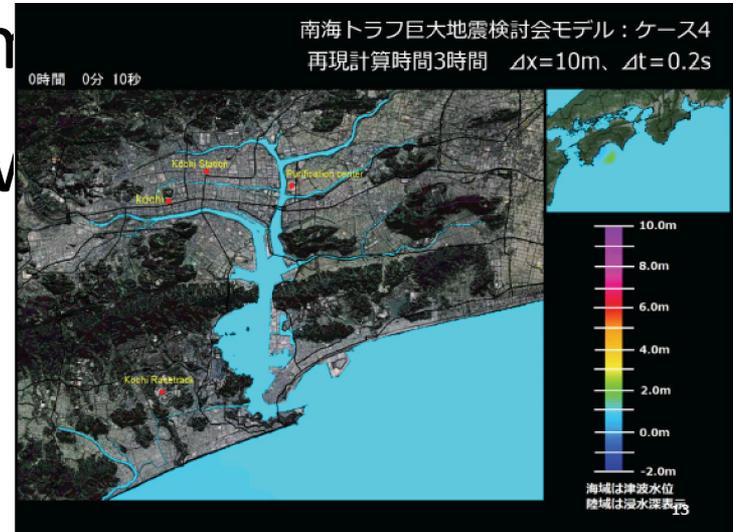

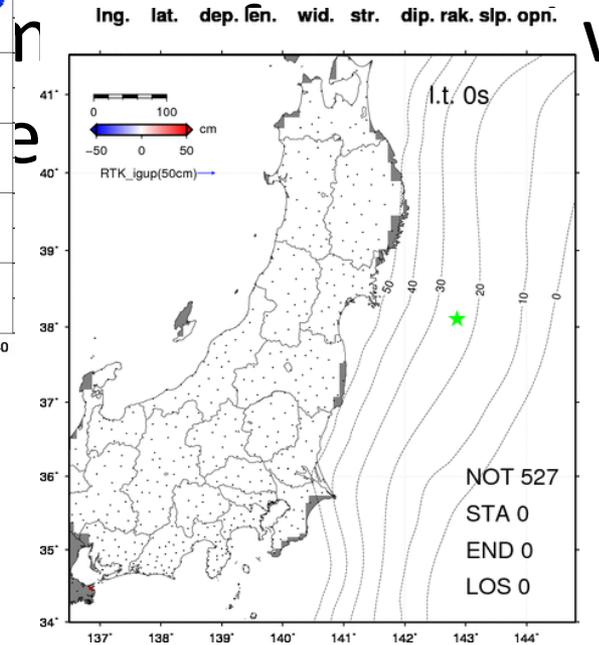

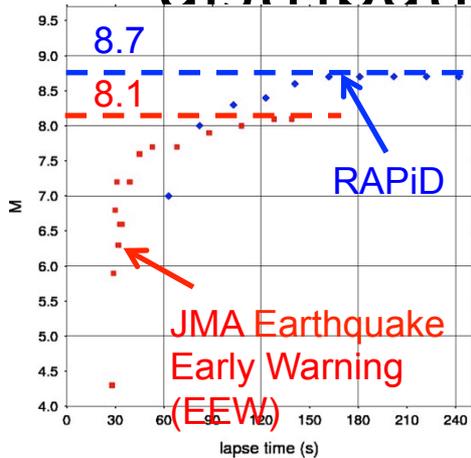

Projecto CREST (Big Data)

Tsunami Simulation

- Real time forecast of worse scenario of tsunami using Gaussian probability distribution and super com

Ohta et al, 2012
Koshimura, 2016

10-10-10 challenge

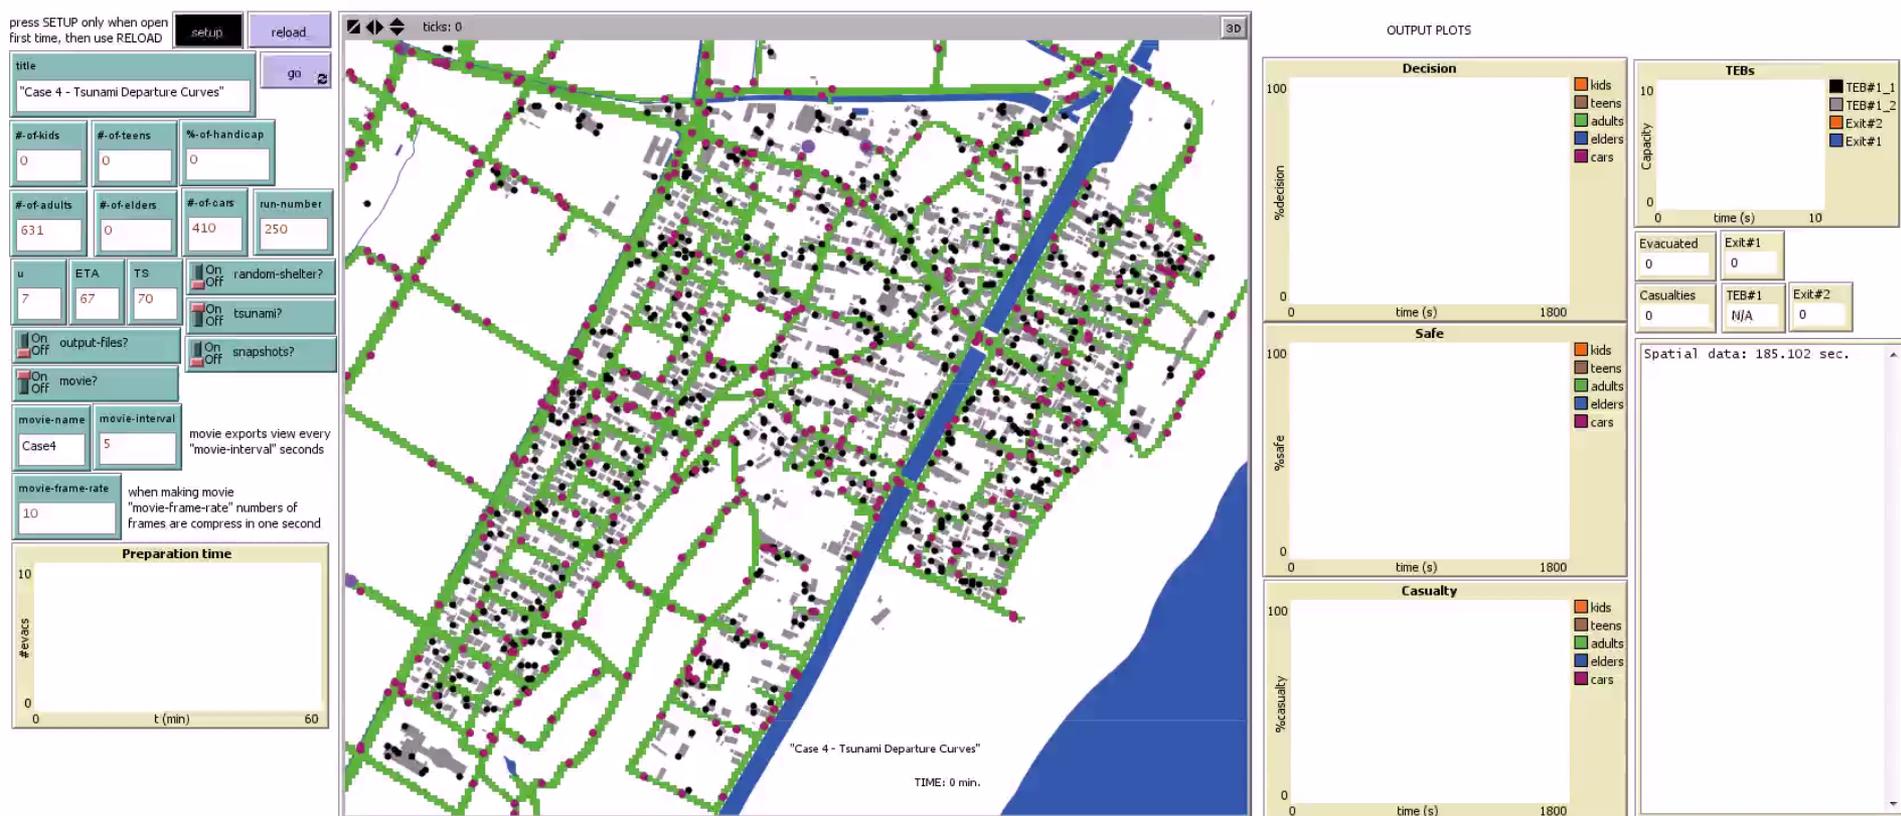

- Tsunami source (<10min)
- Tsunami simulation (<10min)
- 10m grid

Agent-based modeling

- Tsunami Inundation and Evacuation Simulation

Mas, 2016

Agent-based modeling

- UAV swarm planning tool
- Disaster support logistic optimization

Search And Rescue Planner (SARP)

1. Setup the environment (Disaster Area)

X0	Y0	DXY
494692.32	4224193.43	5

Import terrain Draw Area Close Area

2. Edit waypoints for route planning

Add Erase Wstart Wend

Show 0 0

3. Add units for the mission

Add Units Show

4. Plan Mission (Press Button to calculate)

Plan

5. Execute the Mission (see units walk the calculated path)

Execute

To start a new mission in the same environment press REFRESH and start from step 2. Or to start a different mission go back to Step 1.

On Off save-log?

Refresh

**WORLD
TSUNAMI
AWARENESS
5 NOVEMBER 2016 DAY**

11月5日は
津波防災の日

The banner features a blue border and a light blue background. On the left, the text 'WORLD TSUNAMI AWARENESS 5 NOVEMBER 2016 DAY' is displayed in black and teal. In the center is a circular icon of a green and blue wave. On the right, the Japanese text '11月5日は津波防災の日' is written in red and blue, with a stylized wave background.
